Introduction to Linux & R

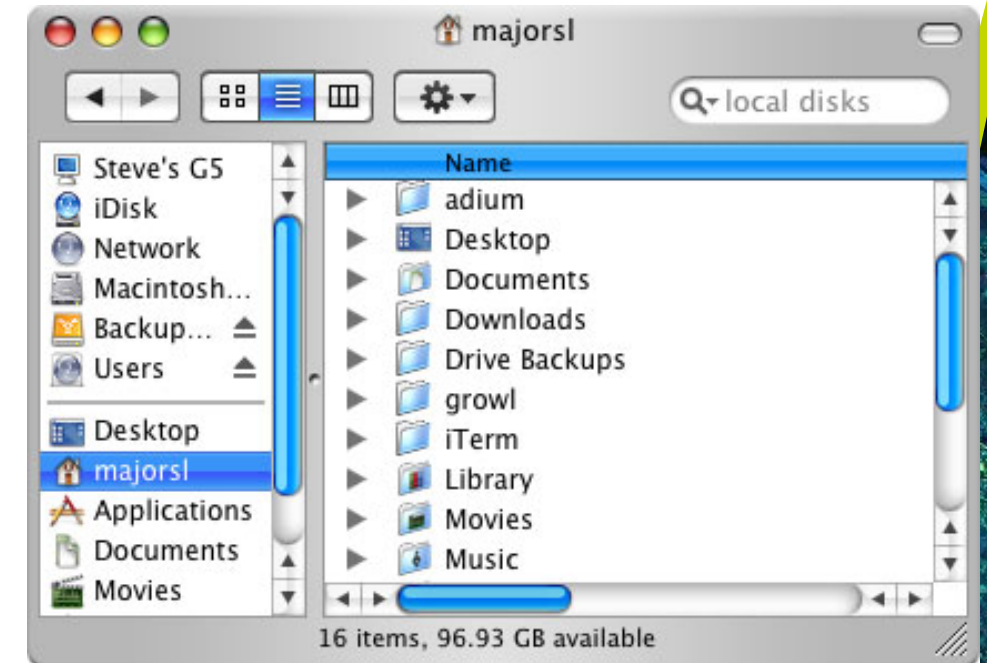

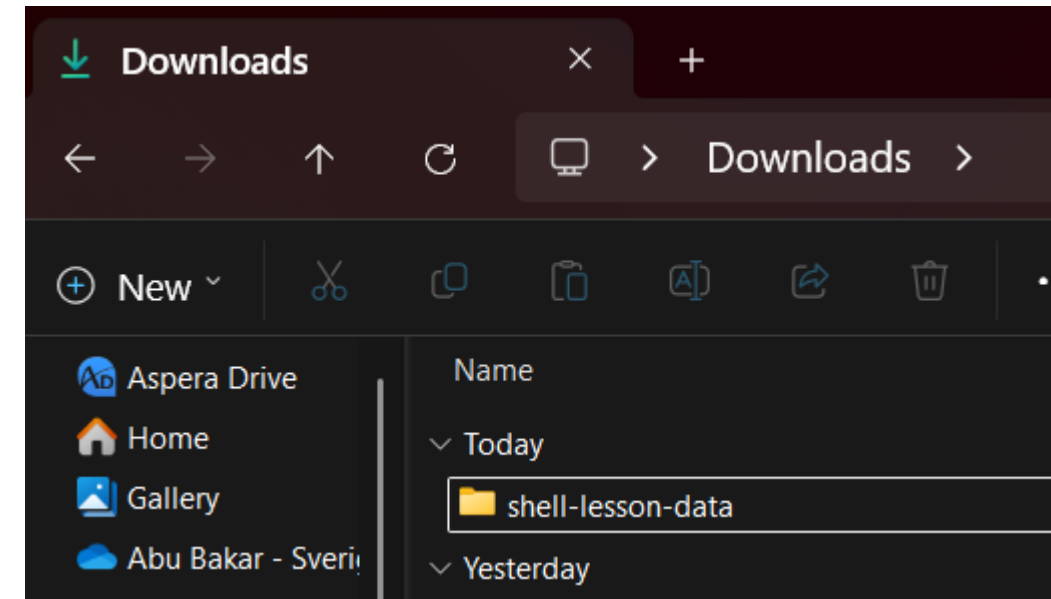

Abu Bakar Siddique
Bioinformatician, SLUBI

Introduction to Linux

GUI

CLI (Linux)

```

abuslu@vbsg-asiddique x + v - □ ×
(base) abuslu@vbsg-asiddique:/$ ls
bin  init  lost+found  root  sys  wslOLKdLM
boot lib  media      run   tmp  wslPbmDDL
dev  lib32  mnt        sbin  usr  wsleOlmKM
etc  lib64  opt        snap  var  wslfAACGL
home libx32  proc      srv   wslBcLjOM  wslnAMOEI
(base) abuslu@vbsg-asiddique:/$
  
```

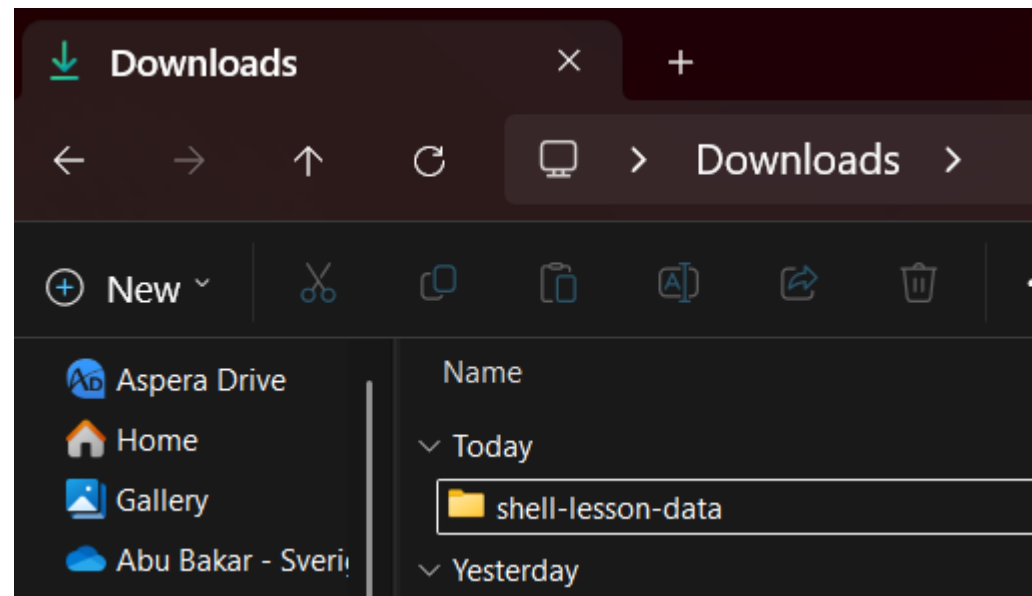

GUI vs Linux

Graphical User Interface (GUI):

- **visual** representations

Command Line Interface (CLI): WSL, Terminal, LINUX, Ubuntu, UNIX etc

- **text** representations
- **shell** (or bash) is a **program** that allows you **to control CLI** with keyboard

```
abuslu@vbsg-asiddique x + v
(base) abuslu@vbsg-asiddique:~$ cd /mnt/c/Users/auue0001/Downloads
(base) abuslu@vbsg-asiddique:/mnt/c/Users/auue0001/Downloads$ |
```

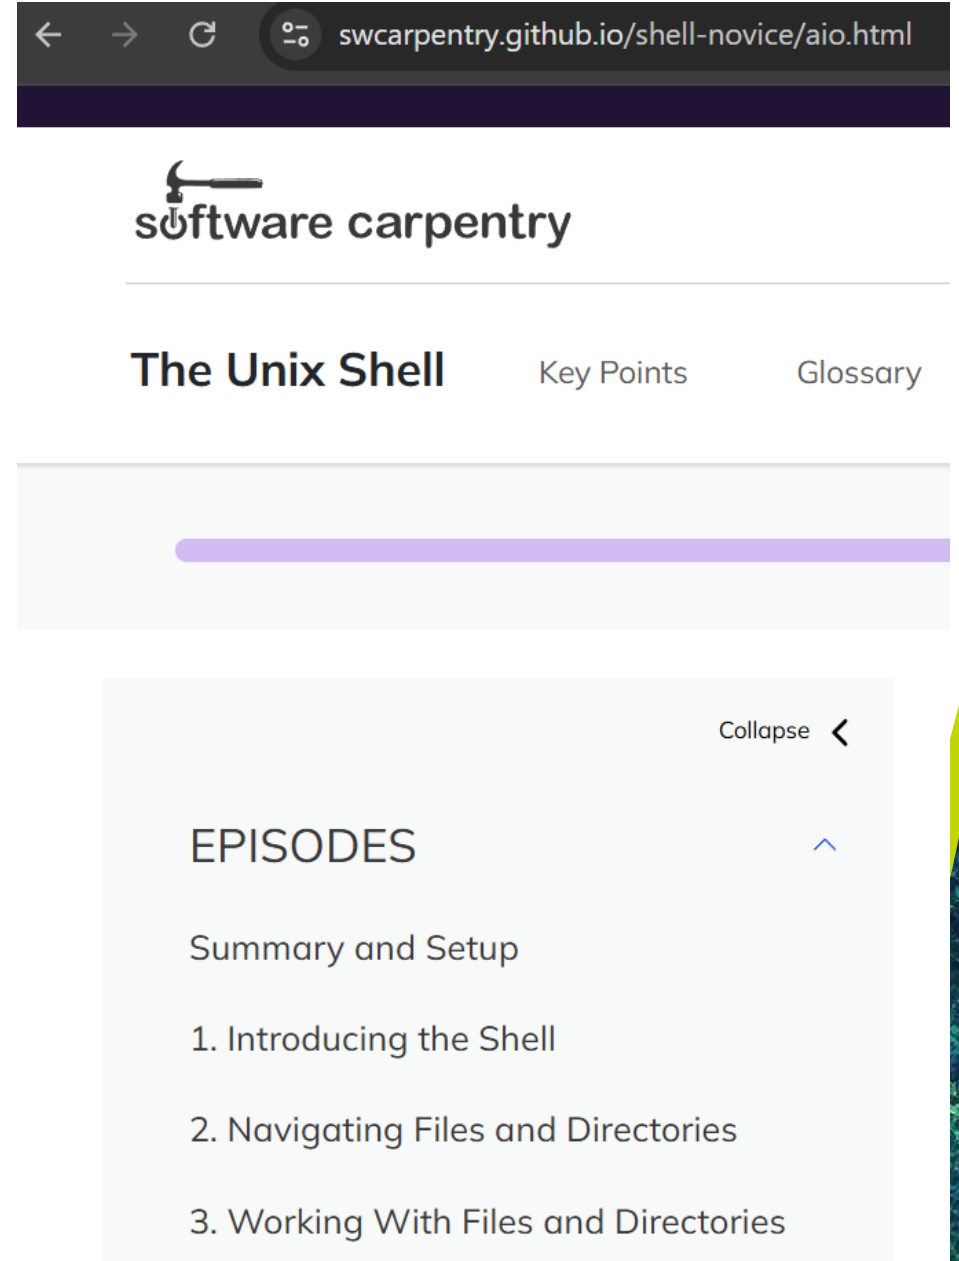

Why Linux?

- A **powerful** command-line interface (CLI)
- Built for **multi-user systems**.
- An enormous amount of **software is freely** available
- **Bioinformatics tools** can only be used **through a CLI**
- *shell* makes your work **less boring**
- *shell* makes your work **less error-prone**
- *shell* makes your work more **reproducible**
- Computationally **intensive job**
- Remote computer or **cloud computing**

Full Tutorial

- The Unix shell

The screenshot shows a web browser window with the address bar displaying `swcarpentry.github.io/shell-novice/aio.html`. The page features the 'software carpentry' logo, which includes a hammer icon. Below the logo, there are navigation links: 'The Unix Shell' (which is highlighted), 'Key Points', and 'Glossary'. A purple progress bar is visible below the navigation links. On the right side of the page, there is a 'Collapse' button with a left-pointing arrow. The main content area is titled 'EPISODES' with an upward-pointing arrow. Below this title, there is a list of episodes: 'Summary and Setup', '1. Introducing the Shell', '2. Navigating Files and Directories', and '3. Working With Files and Directories'.

EPISODES ^

Summary and Setup

1. Introducing the Shell

2. Navigating Files and Directories

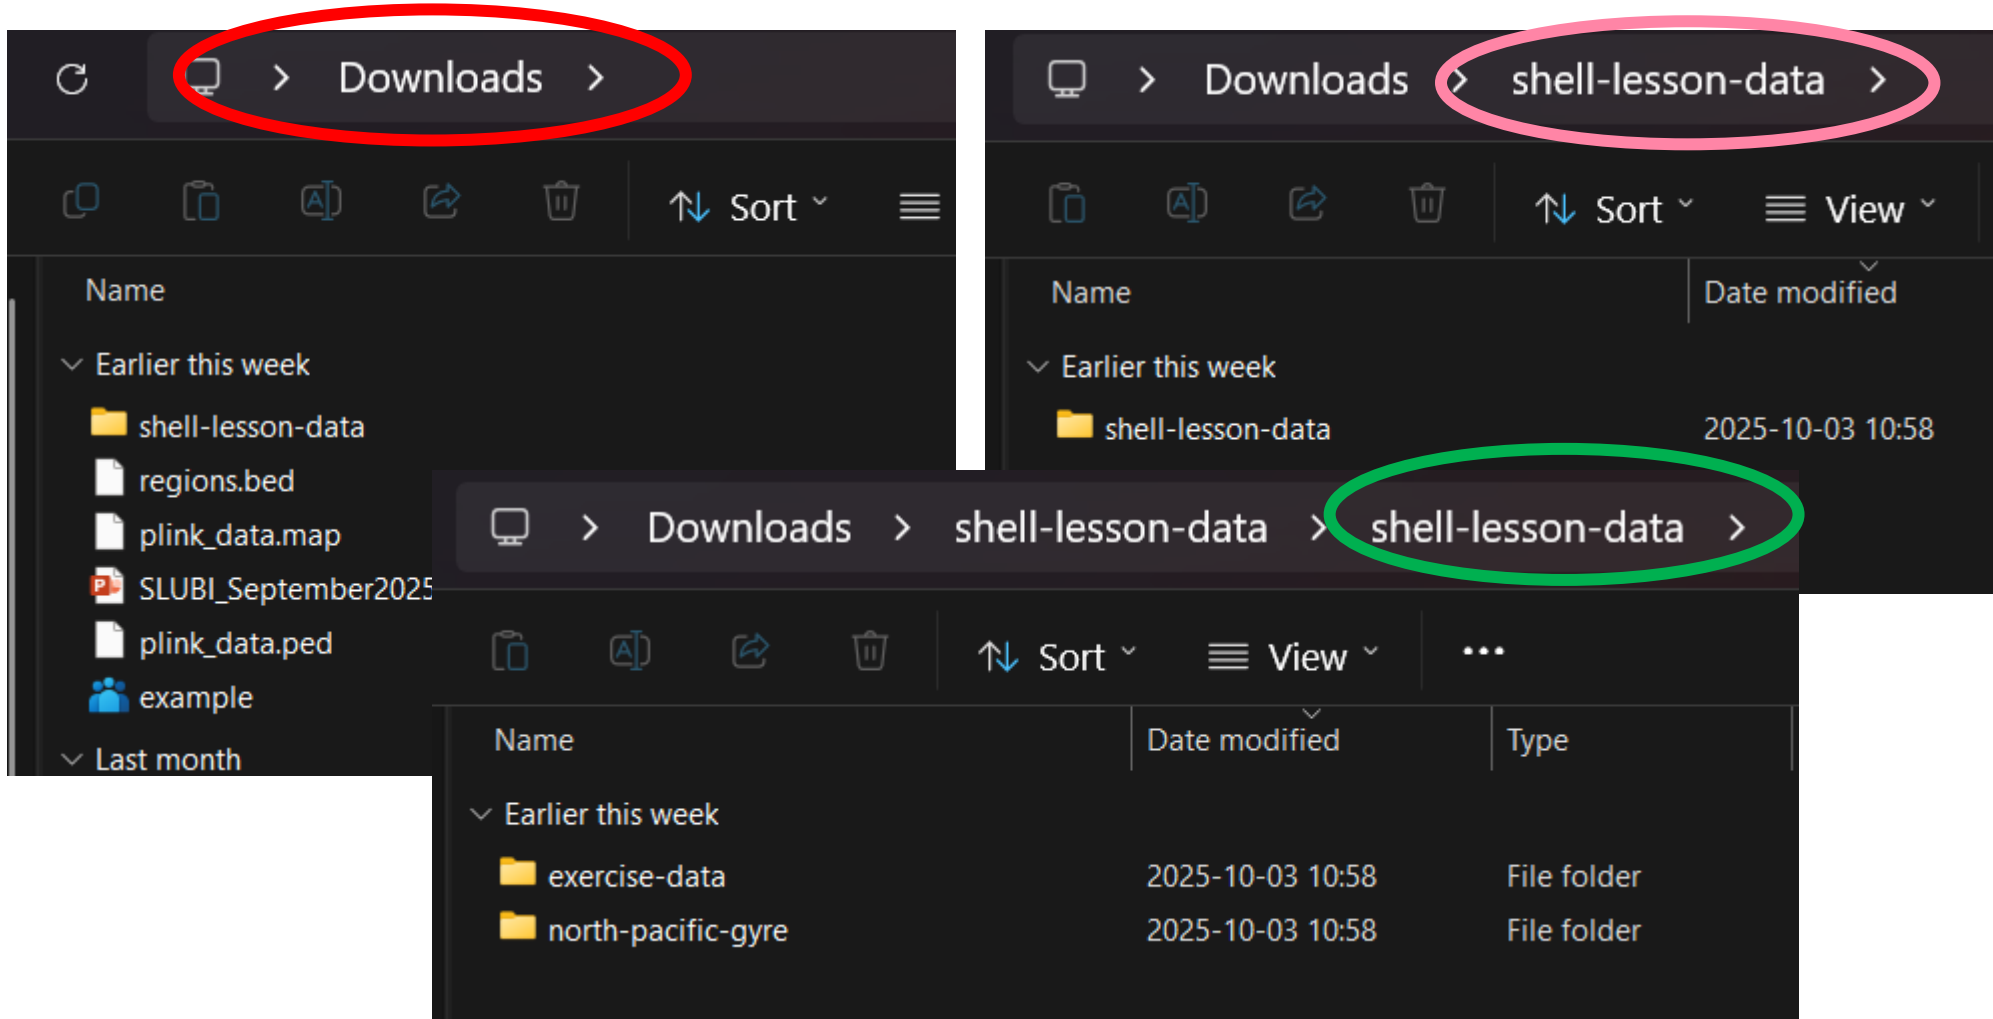

3. Working With Files and Directories

Navigating your file system

Navigating your file system

The image shows three sequential screenshots of a file explorer interface, illustrating the steps to navigate to a specific folder.

Screenshot 1: The file explorer is open to the **Downloads** folder. The breadcrumb path is **Downloads**.

Screenshot 2: The file explorer is open to the **Downloads > shell-lesson-data** folder. The breadcrumb path is **Downloads > shell-lesson-data**.

Screenshot 3: The file explorer is open to the **Downloads > shell-lesson-data > shell-lesson-data** folder. The breadcrumb path is **Downloads > shell-lesson-data > shell-lesson-data**.

The file explorer interface includes a sidebar with a list of files and folders, a main pane showing the contents of the selected folder, and a breadcrumb path at the top. The files and folders listed in the sidebar are:

- Earlier this week
 - shell-lesson-data
 - regions.bed
 - plink_data.map
 - SLUBI_September2025
 - plink_data.ped
 - example
- Last month

The main pane displays a table of files and folders:

Name	Date modified	Type
Earlier this week		
shell-lesson-data	2025-10-03 10:58	File folder
exercise-data	2025-10-03 10:58	File folder
north-pacific-gyre	2025-10-03 10:58	File folder

Navigating your file system

Linux way

- `cd` – change working directory

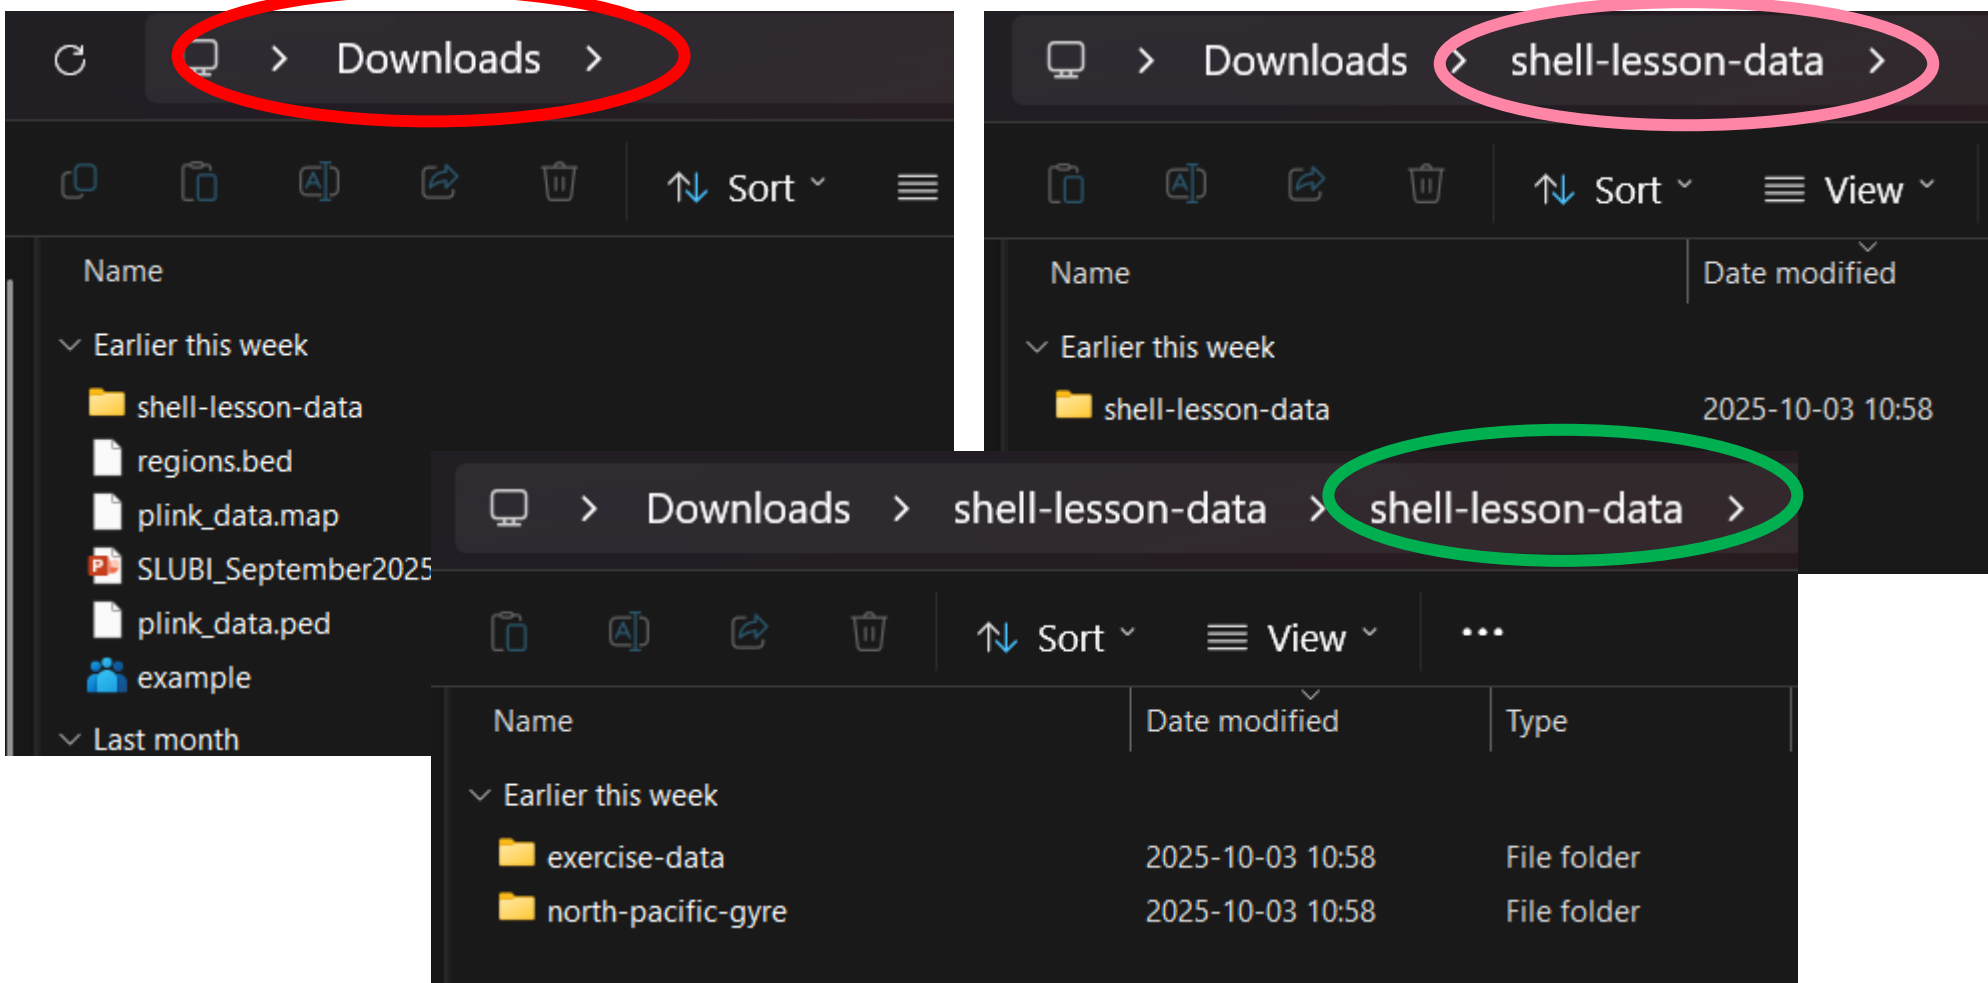

```
abuslu@vbsg-asiddique × + v  
(base) abuslu@vbsg-asiddique:/$
```

```
(base) abuslu@vbsg-asiddique:~$ cd /mnt/c/Users/auue0001/Downloads  
(base) abuslu@vbsg-asiddique:/mnt/c/Users/auue0001/Downloads$ |
```

```
(base) abuslu@vbsg-asiddique:/mnt/c/Users/auue0001/Downloads$ cd shell-lesson-data/  
(base) abuslu@vbsg-asiddique:/mnt/c/Users/auue0001/Downloads/shell-lesson-data$
```

```
(base) abuslu@vbsg-asiddique:/mnt/c/Users/auue0001/Downloads/shell-lesson-data$ cd shell-lesson-data/  
(base) abuslu@vbsg-asiddique:/mnt/c/Users/auue0001/Downloads/shell-lesson-data/shell-lesson-data$
```

Navigating your file system

The image shows three overlapping screenshots of a Windows File Explorer window, illustrating the navigation path to a specific folder. The path is highlighted with colored circles: a red circle for the 'Downloads' folder, a pink circle for the 'shell-lesson-data' folder, and a green circle for the 'shell-lesson-data' folder.

Top Left Screenshot: Shows the 'Downloads' folder. The left sidebar lists files and folders, including 'shell-lesson-data', 'regions.bed', 'plink_data.map', 'SLUBI_September2025', 'plink_data.ped', and 'example'.

Top Right Screenshot: Shows the 'shell-lesson-data' folder. The file list shows a folder named 'shell-lesson-data' with a date modified of '2025-10-03 10:58'.

Bottom Screenshot: Shows the 'shell-lesson-data' folder. The file list shows two folders: 'exercise-data' and 'north-pacific-gyre', both with a date modified of '2025-10-03 10:58'.

Name	Date modified	Type
Exercise this week		
exercise-data	2025-10-03 10:58	File folder
north-pacific-gyre	2025-10-03 10:58	File folder

Navigating your file system

- `ls` – list content of directory

```
(base) abuslu@vbsg-asiddique:/mnt/c/Users/auue0001/Downloads/shell-lesson-data/shell-lesson-data$ ls
exercise-data  north-pacific-gyre
(base) abuslu@vbsg-asiddique:/mnt/c/Users/auue0001/Downloads/shell-lesson-data/shell-lesson-data$ |
(base) abuslu@vbsg-asiddique:/mnt/c/Users/auue0001/Downloads$ ls
1748541649-takbir-muna-family-dev-10-steps-imam-ajmal-masroor.png
1750352364-Imam-Ajmal-2.jpg
1750352364-Imam-Ajmal-2.png
2023_AMRI_SLUBI_Practical_considerations_and_available_tools_for_big_data_science_abp.pptx
'2025-08-26 NOC Secretariat meeting summary.jpg'
223256388_invoice.pdf
'3.daily temperature 7 and 18 stataion-20250904T073127Z-1-001'
'3.daily temperature 7 and 18 stataion-20250904T073127Z-1-001.zip'
```

Navigating your file system

- `pwd` – present working directory

```
(base) abuslu@vbsg-asiddique:~$ pwd  
/home/abuslu
```

```
(base) abuslu@vbsg-asiddique:/mnt/c/Users/auue0001/Downloads/shell-lesson-data/shell-lesson-data$ pwd  
/mnt/c/Users/auue0001/Downloads/shell-lesson-data/shell-lesson-data
```

Absolute/Relative path

- Absolute paths
 - Starts with a /
 - Defined **from the root** of the file system

```
/mnt/c/Users/auue0001/Downloads/shell-lesson-data/shell-lesson-data/
```

- Like an **address**:
Sweden, Uppsala, Ultuna, Biocentre, 4th floor, room A436

Absolute/Relative path

- Relative paths
 - **Does not start with a /**
 - **Relative** to where you are when using it

`exercise-data/numbers.txt`

`../exercise-data/numbers.txt`

- Like a **direction** (from Campus ultuna):
‘straight, then turn left, 4th floor, right, then left’

Summary

- `ls` – list content of directory
- `cd` – change working directory
- `pwd` – print working directory
- absolute/relative paths

More practice (*after lunch*)

- ○ ls – list content of directory
- ○ cd – change working directory
- ○ pwd – print working directory
- ○ absolute/relative paths
- ○ **mkdir** – make a directory
- ○ **cp** – copy a file
- ○ **mv** – move a file
- ○ less – view a file
- ○ nano – view and edit a file
- ○ rm – remove a file
- ○ head / tail
- ○ **grep**
- ○ find
- ○ wildcards
- ○ tab completion – use it!!!
- ○ top – see active processes
- ○ man – manual pages or
anycommand --help
- ○ exit – Log out current terminal

30 minutes...

Introduction to basic R

Contents

- About R
- R vs Rstudio
- Timeline
- Setting a project or working directory
- Interacting with R
- Packages
- Assign values or objects
- Data types
- Data structures
- How to import and export data or results
- Housekeeping

Basic about R

R is ...

- a programming **language**
- a programming **platform** (= environment + interpreter)
- a **software project** driven by the core team and the community
- a very powerful **tool for statistical** computing
- a very powerful **computational tool** in general

Yet ...

- it is **very elegant**
- it becomes more and **more feature-rich**

R is not ...

- a tool to **replace a statistician**
- the **very best** programming language
- the **most elegant** programming solution
- the **most efficient** programming language

R: Engine

RStudio: Dashboard

R

- Programming **language**
- For **data analysis and graphics**
- Refers to both the **language** and the **software** that interprets its **scripts**
- **Free** and **open** source

RStudio

- User **interface** for working with R
- **Wrapper** around the R language
- Extends what R can do and **facilitates writing R code**
- **Free** and **open** source

Timeline

- ca. 1992 — conceived by [Robert Gentleman](#) and [Ross Ihaka](#) (R&R) at the University of Auckland, NZ as a tool for **teaching statistics**
- 1994 — initial version
- 2000 — stable version
- 2011 — [RStudio](#), first release by J.J. Allaire
- ca. 2017 — Tidyverse by [Hadley Wickham](#)

Setting up a project

RStudio

File Edit Code View Plots Session Build Debug

Back Create New Project

Directory name:
r4ds

Create project as subdirectory of:
~/Desktop Browse...

☐ Create a git repository

☐ Use renv with this project

☐ Open in new session

Create Project Cancel

The working directory

- Where R will look for and save files
- Check working directory with the `getwd()` , `setwd()` functions

```
> getwd()  
[1] "C:/Users/auue0001/OneDrive - Sveriges lantbruksuniversitet/Dokument"
```

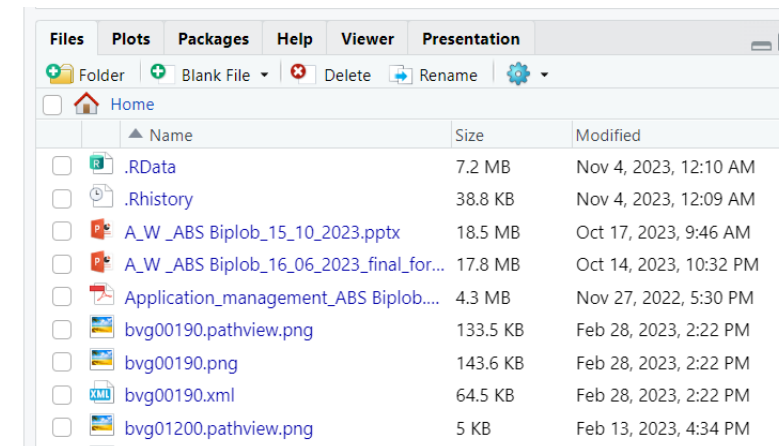

```
> setwd("C:/Users/auue0001/OneDrive - Sveriges lantbruksuniversitet/Dokument")
```

Suggested subdirectories

- data/ for raw data and intermediate datasets
- data_output/ modified versions of raw data
- documents/ outlines, drafts, other text
- fig_output/ graphics generated by scripts
- scripts/ R scripts for different analyses or plotting

create subdirectory

```
dir.create(path = "path_to_working_directory/data_output")
```

Interacting with R

Packages

- developed **by** the **community**
- cover several very **diverse areas** of science/life
- **uniformly** structured and documented
- organized in **repositories**:
 - [CRAN](#)

```
install.packages("tidyverse")
```

```
library("tidyverse")
```

```
RStudio

R version 3.2.4 Revised (2016-03-16 r70336) -- "Very Secure Dishes"
Copyright (C) 2016 The R Foundation for Statistical Computing
Platform: x86_64-apple-darwin15.3.0 (64-bit)

R is free software and comes with ABSOLUTELY NO WARRANTY.
You are welcome to redistribute it under certain conditions.
Type 'license()' or 'licence()' for distribution details.

Natural language support but running in an English locale

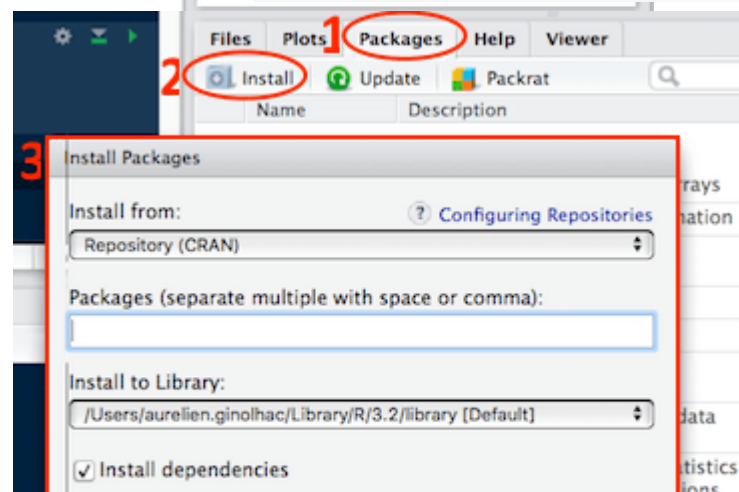

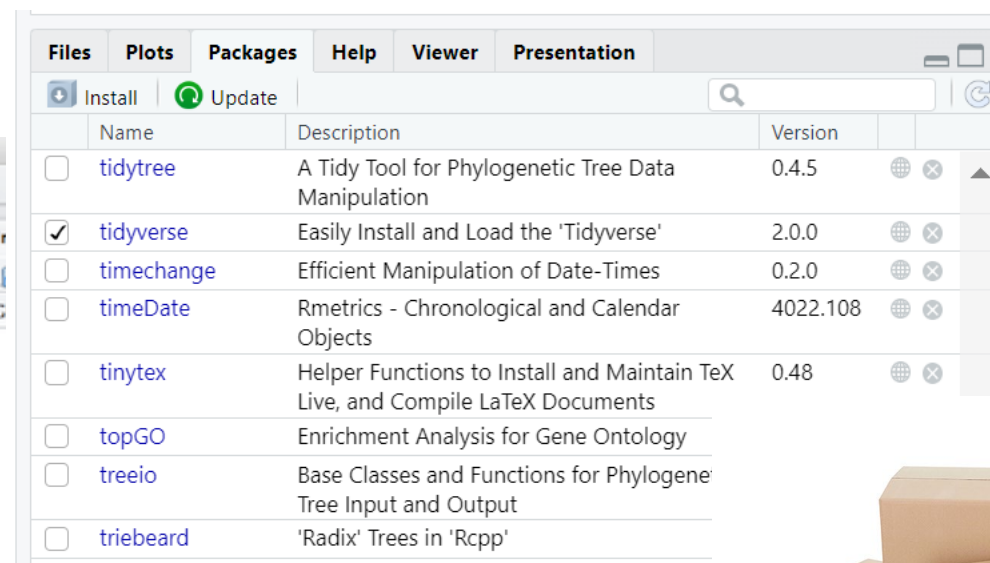

R is a collaborative project with many contributors.
Type 'contributors()' for more information and
'citation()' on how to cite R or R packages in publications.

Type 'demo()' for some demos, 'help()' for on-line help, or
'help.start()' for an HTML browser interface to help.
Type 'q()' to quit R.

>

— Conflicts — tidyverse_conflicts() —
✖ dplyr::filter() masks stats::filter()
✖ dplyr::lag() masks stats::lag()
i Use the conflicted package to force all conflicts to become errors
```

Packages

- developed **by** the **community**
- cover several very **diverse areas** of science/life
- **uniformly** structured and documented
- organized in **repositories**:
 - [CRAN](#)
 - [Bioconductor](#)
 - [R-Forge](#)
 - [GitHub](#)

```
if (!require("BiocManager", quietly = TRUE))
  install.packages("BiocManager")
BiocManager::install(version = "3.18")
```

Assign values to objects

Assign values to objects

```
p <- 3
```

```
x <- c(1, 6, 8)
```

```
y <- c("car", "truck")
```

Scalars, vectors and matrices

Types of vectors and objects

- **Scalar** (0 dimension):

```
p <- 3
```

- **Vector** (arrays -1 dimension) :

```
x <- c(1, 6, 8)
```

```
y <- ("car", "truck")
```

```
1 > vec1 = c(1,4,6,8,10)
2 > vec1
3 [1] 1 4 6 8 10
4 > vec1[5]
5 [1] 10
```

- **Matrix** (2 dimension):

```
1 mat=matrix(data=c(9,2,3,4,5,6),ncol=3)
2 > mat
3      [,1] [,2] [,3]
4 [1,]    9    3    5
5 [2,]    2    4    6
```

Types of vectors and objects

- **character:** `y <- ("car", "truck")`
- **numeric:** `x <- c(1.1, 6.2, 8.4)`
- **integer:** `z <- 2`
- **logical:** `TRUE, FALSE`
- **complex:** `1+4i` (complex numbers with real and imaginary parts)

R has many functions to examine features of vectors and other objects:

- `class()` - what kind of object is it (high-level)?
- `typeof()` - what is the object's data type (low-level)?
- `length()` - how long is it? What about two dimensional objects?
- `attributes()` - does it have any metadata?

Structures

Data structures

- Matrix
- Data frames
- Factors (r assign a level for each values)
- Arrays
- Lists

```
> x <- 1:12

> # Create a 3 x 4 array from the vector
> my_array <- array(values, dim = c(3, 4))

> # Print the array
> print(my_array)
      [,1] [,2] [,3] [,4]
[1,]  1   4   7  10
[2,]  2   5   8  11
[3,]  3   6   9  12
> values
[1] 1 2 3 4 5 6 7 8 9 10 11 12
```

```
1 mat=matrix(data=c(9,2,3,4,5,6),ncol=3)
2 > mat
3           [,1] [,2] [,3]
4 [1,]      9   3   5
5 [2,]      2   4   6
```

```
1 > t = data.frame(x = c(11,12,14),
2   y = c(19,20,21), z = c(10,9,7))
3 > t
4      x y z
5 1 11 19 10
6 2 12 20  9
7 3 14 21  7
```

```
1 > L = list(one=1, two=c(1,2),
2   five=seq(0, 1, length=5))
3 > L
4 $one
5 [1] 1
6 $two
7 [1] 1 2
```

Getting a dataset in R

country	year	cases	population
Afghanistan	1999	745	19987071
Afghanistan	2000	2666	20595360
Brazil	1999	37737	172006362
Brazil	2000	80488	174504898
China	1999	212258	1272915272
China	2000	213766	1280425583

variables

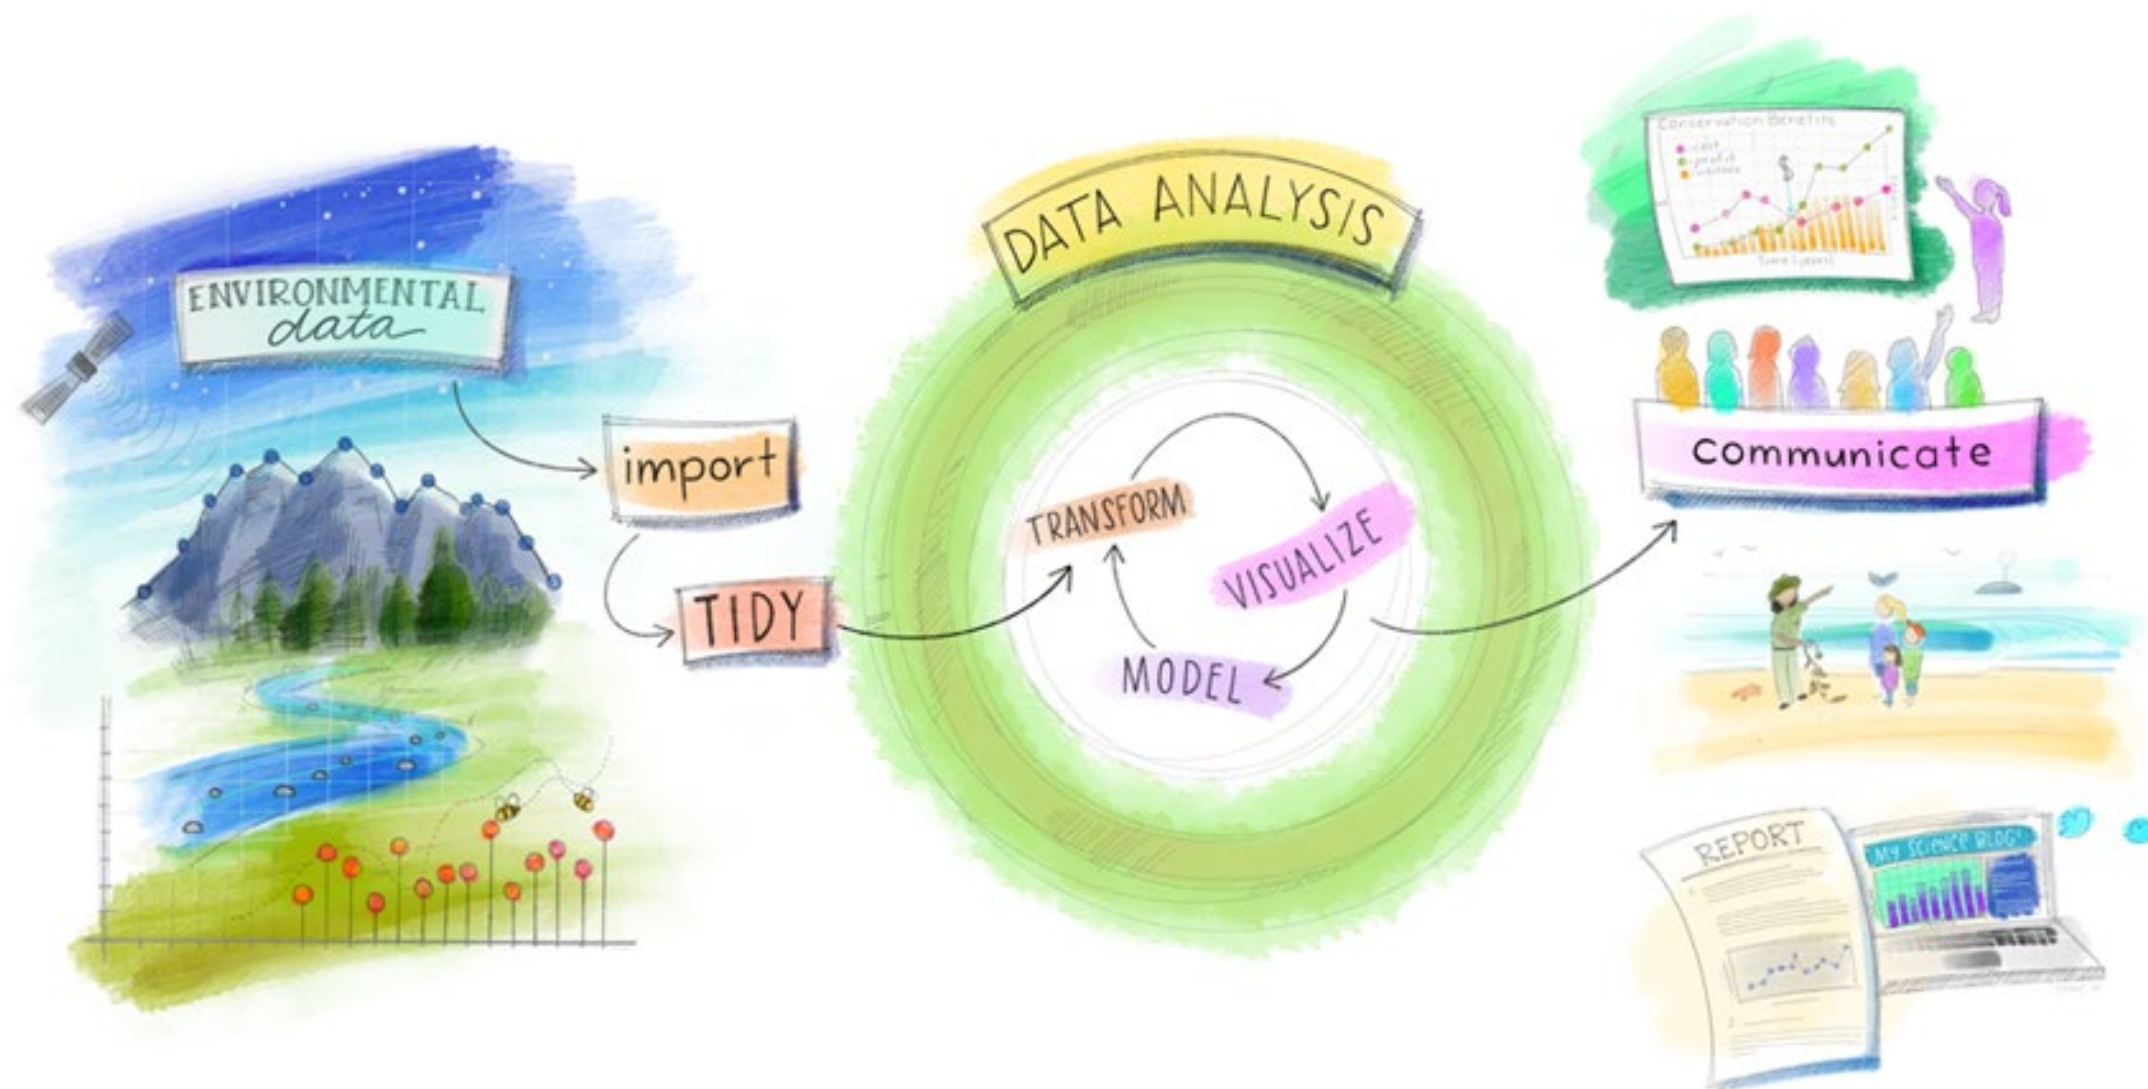

country	year	cases	population
Afghanistan	1999	745	19987071
Afghanistan	2000	2666	20595360
Brazil	1999	37737	172006362
Brazil	2000	80488	174504898
China	1999	212258	1272915272
China	2000	213766	1280425583

observations

country	year	cases	population
Afghanistan	99	745	19987071
Afghanistan	00	2666	20595360
Brazil	99	37737	172006362
Brazil	00	80488	174504898
China	99	212258	1272915272
China	00	213766	1280425583

values

Processes

How to **export** or save as **results** or **data**

```
write.csv(df , file = "path/to/your/saving/folder/df.csv")
```

```
writexl::write_xlsx (test_df, path = "C:/Users/your_username/test_df.xlsx",  
col_names = TRUE, format_headers = TRUE)
```

How to **export** or save as **plot**

```
dev.print (device=jpeg, file="path/to/your/saving/plots/figure_1a.jpg",  
width=par("din")[1]*300, res=300, quality=100)
```

```
ggsave("path/to/your/saving/plots/figure_1a.png", plot = p1, bg ="white")
```

!! Practical session (afternoon session): read a data file into Rstudio!!

Seeking help

- RStudio help interface
 - `?sum`
 - `help.search()`, with term in “” inside parentheses
- Google or chatgpt “R <task>”
- When asking others
 - Use correct words
 - Reduce to reproducible example
 - Always include output of `sessionInfo()` function

Good housekeeping strategies for scripts

- **Comments, Structure:**
 - Use #
 - Outline
- **Consistent Naming Conventions:**
 - Use consistent naming conventions for variables, functions, and objects
 - Avoid duplicating code. create a function or use a loop
- **Version Control:**
 - Git. Platforms like GitHub or GitLab repositories.
- **Imports and Dependencies:**
 - List all package imports at the top of your script
 - call rhistory: sessionInfo()
- **File Organization:**
 - Separate your R scripts, data, documentation, and output files into logical folders.
- **Reproducibility:**
 - Use [Quarto](#), R Markdown Documents:
 - Documentation Files:
 - Create README files

Filtering of genotype data

- Subset data, metadata
 - Based on “rows (observations)”, “variable” or “values”
 - Filter
- Missing data (“NA”, stat, summary)

```
height_sub_12 <- subset(data, height<12)
```

```
data_filter_na <- data[!is.na(data$height),]
```

- `mutate()` adds new variables that are functions of existing variables
- `select()` picks variables based on their names.
- `filter()` picks cases based on their values.
- `summarise()` reduces multiple values down to a single summary.
- `arrange()` changes the ordering of the rows.

Questions?!
